### Abstract

During the 2014-2015 period of environmental air quality research, concentrations of NO<sub>2</sub>, SO<sub>2</sub> and BTEX (benzene, toluene, ethylbenzene and xylenes) and PM<sub>10</sub> were measured. In order to evaluate the spatial distribution of pollutants, 5 sampling sites in Anykščiai city (Lithuania) were chosen. Measured values of NO<sub>2</sub>, SO<sub>2</sub>, PM<sub>10</sub> and benzene were compared with limit values set for these pollutants in ambient air according to 2008/50/EC and 2000/69/EC directives. Toluene, ethylbenzene, and xylenes (*ortho*, *meta*, and *para*) were not included into the list of pollutants, which amount in ambient air is regulated according to European Union criteria. These pollutants are regulated since July 1, 2007 according to national criteria of Lithuania. The NO<sub>2</sub> concentrations in Anykščiai varied from 3.1–4.5 µg/m<sup>3</sup>. The SO<sub>2</sub> concentration was found in the range of <0.3–3.7 µg/m<sup>3</sup>. PM<sub>10</sub> concentration was found in the range of 10.0–29.0 µg/m<sup>3</sup>. Benzene concentrations in Anykščiai varied from 0.4 – 2.8 µg/m<sup>3</sup>, toluene concentrations in Anykščiai varied from 0.9–2.8 µg/m<sup>3</sup>, ethylbenzene concentrations in Anykščiai varied from <0.4–1.8 µg/m<sup>3</sup>, xylenes concentrations in Anykščiai varied from 0.6–5.7 µg/m<sup>3</sup>. The annual average of NO<sub>2</sub>, SO<sub>2</sub>, PM<sub>10</sub> and BTEX and concentrations were below the permissible limits in all five places.

*Key words:* ambient air, BTEX, NO<sub>2</sub>, SO<sub>2</sub>, PM<sub>10</sub>
