Abstract

The Socrates/Erasmus program (MOD project) Bioanalytical Methods – Linking Environmental Protection and Public Health 51388-IC-2-2002-1-RO-ERASMUS-MODUC-3 (2002-2004) has as most important aim the correlation between environmental and public health parameters. Two courses will be elaborated in the frame of Socrates Curricula Development Project, and will be implemented in the partners’ universities. The future DISS project will make possible the dissemination of the MOD and DISS projects, promoting the idea that education at undergraduate level on bioanalytical methods in environmental protection and public health issues must be part of the curricula.

Keywords: educational project, environmental protection, public health, curricula development
