

**The Second IASTED International Conference on  
Environmental Management and  
Engineering**

**~ EME 2010 ~**

**July 15-17, 2010**

**Banff, Alberta, Canada**

The Second IASTED International Conference on Environmental Management and Engineering (EME 2010) will convene scholars, researchers and individuals in government to discuss the challenges posed by the confluence of finite energy supplies, demographic trends and political considerations, and possible solutions to these problems. Threats to the environment, food, and water supplies will be of particular interest. With steady population growth and increasing energy demand around the world, the prudent management of the world's dwindling resources has become an issue of the utmost importance. At the same time, areas with the greatest population growth — and insatiable energy demand — are found in nations with high levels of pollution.

**Conference Chair**

Prof. Ron Thring  
University of Northern British Columbia, Canada

**Keynote Speaker**

"Frontiers in Catalysis for Meeting Climate Change Issues in the 21st Century"  
Dr. A. K. Dalai  
Associate Dean, Research and Partnerships  
Professor and Canada Research Chair, Bioenergy and Environmentally Friendly  
Chemical Processing  
University of Saskatchewan, Canada

**Submissions Due: March 26, 2010**
